

SPS Kindergarten Readiness Numeracy Workshop

March 2025

*Alicia Naleway
District Math & Science Coordinator
Southington Public Schools*

Southington Public Schools

Vision of a Graduate

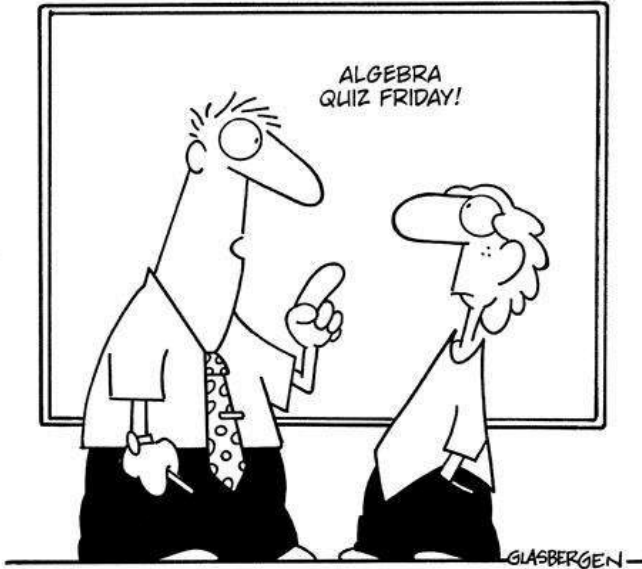

Key Shifts in Common Core Mathematics

- Focuses on conceptual understanding (knowing the “why” and “how”)
- Requires students to apply skills in real world problems and situations
- Encourages multiple strategies and approaches for procedural fluency

Teaching Math in the 21st Century

© Randy Glasbergen / glasbergen.com

"It's important to learn math because someday you might accidentally buy a phone without a calculator."

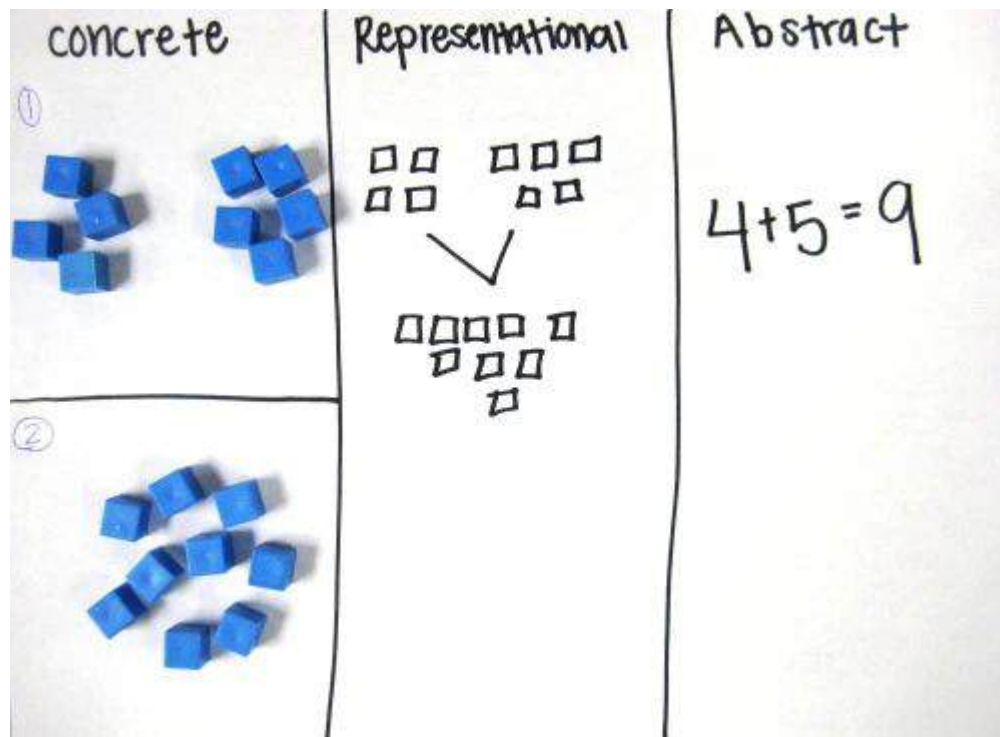

BGR.com

Sneaky 6-year-old gets caught asking Alexa for help with math ...

CRA Learning Model

1. **Concrete:** Objects and materials, “Doing Stage” (chips, beans, cubes)
2. **Representational:** Drawing pictures, “Seeing Stage” (dots, circles, tallies, stamps)
3. **Abstract:** Number, math symbols/notation, “Symbolic Stage” (+, -, =)

Counting and Cardinality:

ELDS-Strand A: Early learning experiences will support children to understand counting and cardinality.

4 to 5 year olds

Activities/Suggestions

Say or sign the number sequence up to at least 20

Turn mealtime into counting fun by having your child count objects as he or she sets the table. (Forks, spoons, napkins, etc)

Count up to 10 objects using one-to-one correspondence, regardless of configuration, using the number name of the last object counted to represent the total number of objects in a set.

Take a handful of your child's favorite cereal and have them count out sets of 2, 3, 4, and 5....

Count out a set of objects up to five.

Counting and Cardinality Continued

ELDS-Strand A: Early learning experiences will support children to understand counting and cardinality.

4 to 5 year olds

Activities/Suggestions

Recognize written numerals up to **at least 10.**

Play “I Spy” with a magazine. Have children locate numbers 1-10 in a magazine and cut them out. Have children sort them into piles of 1’s, 2’s, 3’s etc.

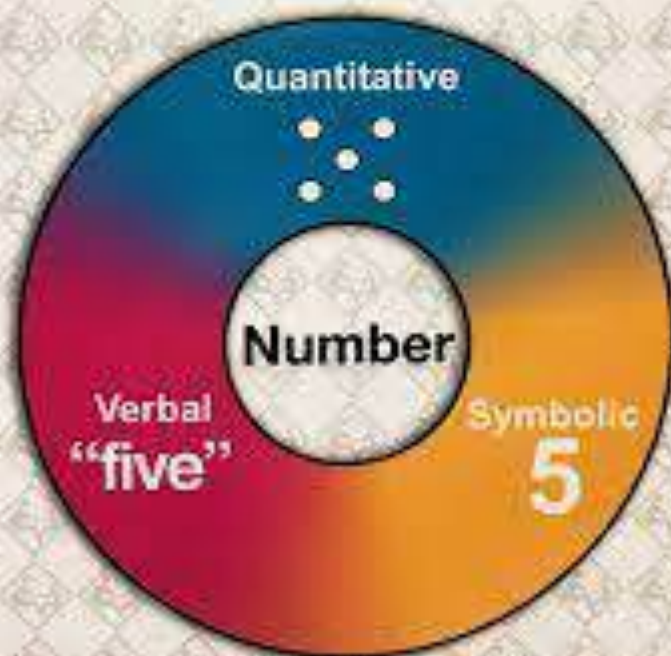

Quickly recognize and name, without counting, the number of objects in collections of up to **at least five items.**

Compare sets of up to 10 objects using a visual matching or counting strategy and describing the comparison as more, less than or the same.

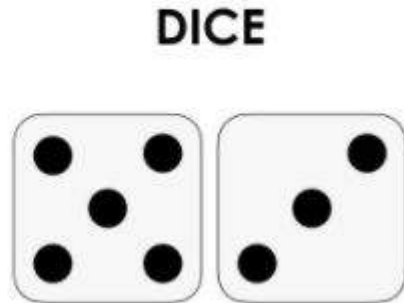

Use a deck of card (numbers 1-9, Jack as 10) and lay them out a few at a time. Have your child count out objects (cubes, chips, cheerios,) and lay them on top of the card to match the number. Have them compare using vocabulary.

The 3 Aspects of Number

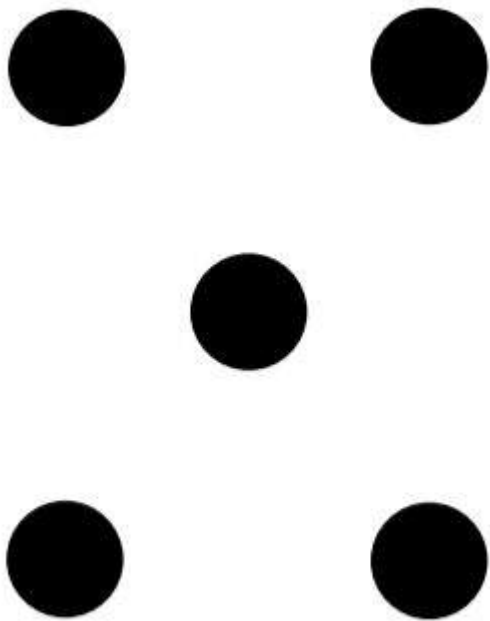

Subitizing

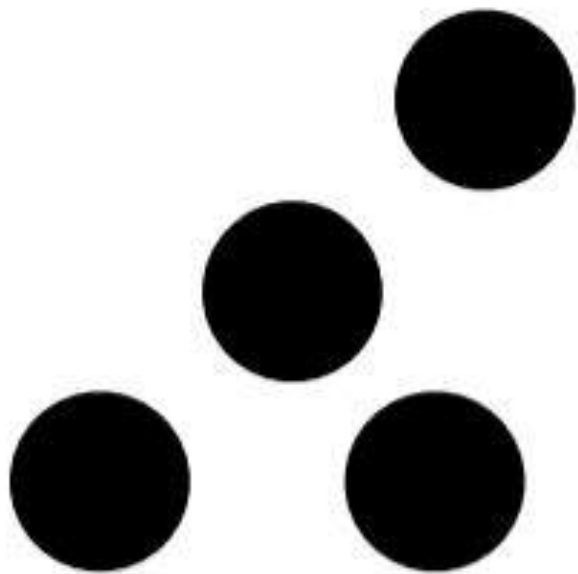

Subitizing is the ability to 'see' a small amount of objects and know how many there are without counting.

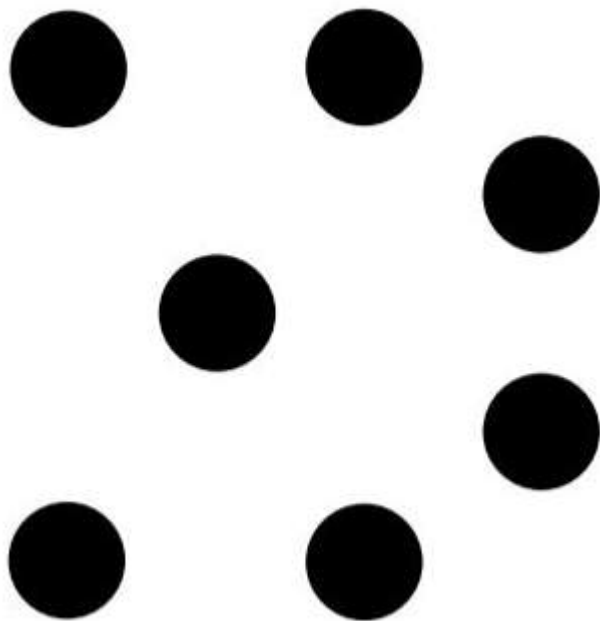

Operations and Algebraic Thinking

ELDS-Strand B: Understand and describe relationships to solve problems.

4 to 5 year olds

Activities/Suggestions

Use real-world situations and concrete objects to model and solve addition and subtraction problems up to five.

Recognize and describe parts contained in larger numbers by composing number combinations up to at least 5.

Use a box of crayons to model adding and subtraction. Create a story problem where your child is handing out crayons to his/her stuffed animals. Practice adding to and taking from.

Measurement and Data

ELDS-Strand C: Understand the attributes and relative properties of objects.

4 to 5 year olds

Activities/Suggestions

Compare the measurable attributes of two or more objects (e.g., length, weight and capacity) and describe the comparison using appropriate vocabulary (e.g., longer, shorter, same weight, holds more, holds less, holds the same amount)

Begin to use strategies to determine measurable attributes (e.g., length or capacity of objects). May use comparison, standard or non-standard measurement tools.

Represent data using a concrete object or picture graph according to one attribute.

Sort and classify a set of objects on the basis of one attribute independently and describe the sorting rule. Can re-sort and classify the same set of objects based on a different attribute.

Collect objects from home or outdoors and sort & classify them into groups based on size, shape, color, pattern, type

Items: leaves, shells, rocks, books, toys, clothes, etc.

Outside Items				
leaves				
shells				

Geometry and Spatial Sense

ELDS-Strand D: Understand shapes and spatial relationships.

4 to 5 year olds

Activities/Suggestions

Use related **vocabulary of proximity** (e.g., beside, next to, between, above, below, over and under) to identify and describe the location of an object.

Provide opportunities for children to take apart, put together and build with blocks: Legos, Tinker Toys, K'nex, etc.

Identify and describe a variety of **2-dimensional and 3-dimensional** shapes with mathematical names (e.g., ball/sphere, box/rectangular prism, can/cylinder) regardless of orientation and size.

Gather a tissue box, an ice cream cone, a can of vegetables, an orange. Discuss the shapes and dimensions with your children.

Complete a **shape puzzle** or a new figure by putting multiple shapes together with purpose.

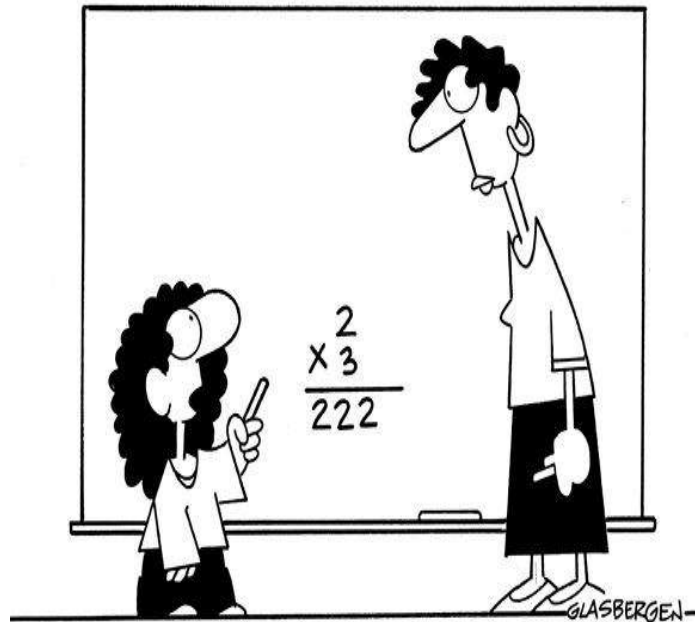

Why don't we just teach math “the old way”?

(Standard Algorithm)

For $245 + 33 = \square$ they may write:

$$\begin{array}{r} 245 \\ + 33 \\ \hline 575 \end{array}$$

© Randy Glasbergen / glasbergen.com

"What do you mean, it's the wrong kind of right?"

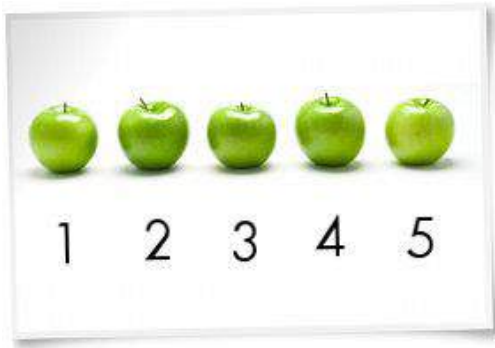

$$\begin{array}{r} 34 \\ + 18 \\ \hline 412 \end{array}$$

We VALUE:
Teaching For
Understanding

What math concepts and terminology do I need to know to support my child in kindergarten math?

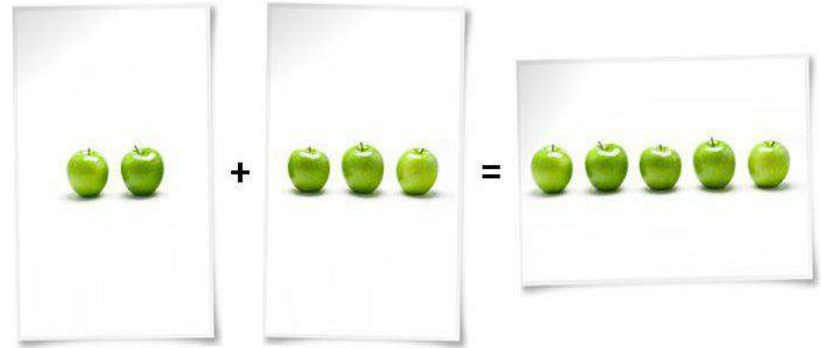

Key Math Terms to Know and Understand

One-to-one Correspondence:

*Matching an object with a numerical (pointing, placing) value and understanding that each object being counted represents “one more.”

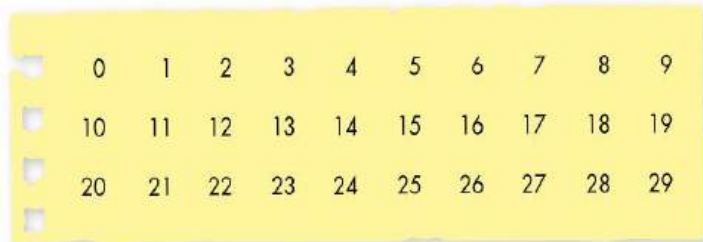

Counting On:

*Continue counting objects added to a previously counted group without recounting the entire group

Key Math Terms to Know and Understand

Patterns:

ABA

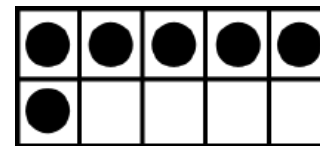

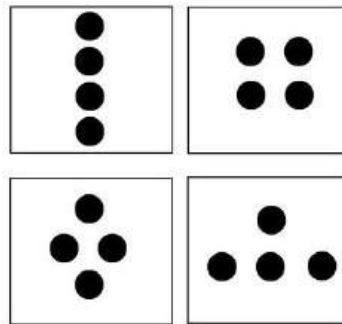

ABC

AAB

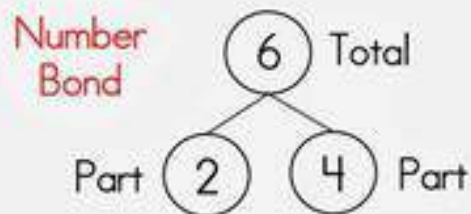

*A pattern is defined as any sequence that repeats at least twice

Subitizing:

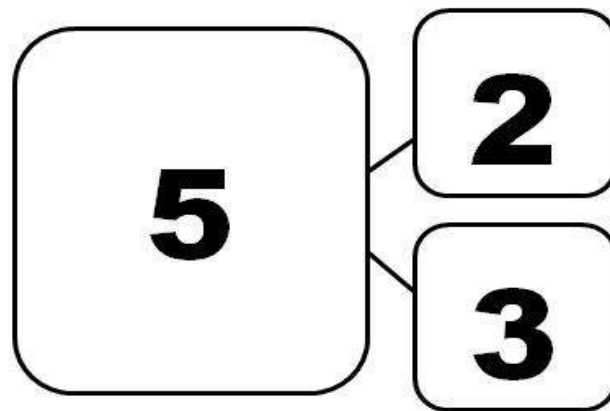

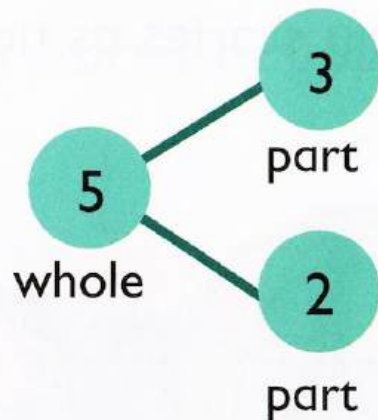

*Subitizing is the ability to 'see' a small amount of objects and know how many there are without counting

Number Bonds

Fact Family

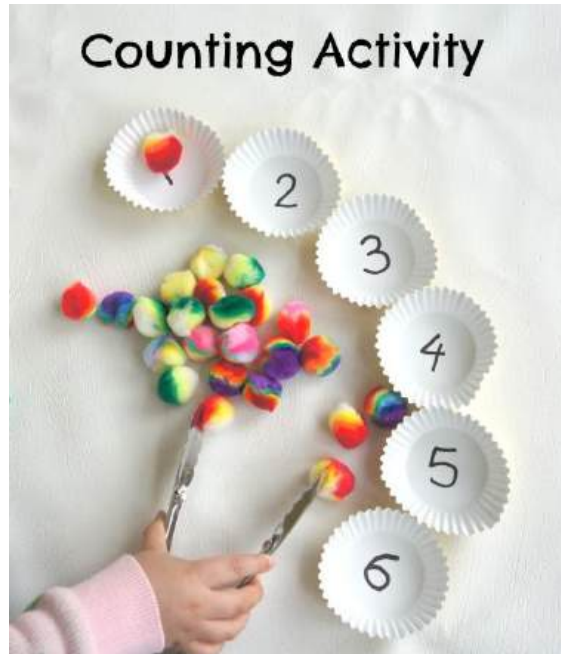

$$\begin{array}{l} 2 + 4 = 6 \\ 4 + 2 = 6 \\ 6 - 4 = 2 \\ 6 - 2 = 4 \end{array}$$

Focus: Number Sense, Fluency within 5, Fact Families, Addition/Subtraction Concepts, Number composition & decomposition

Math Fun For Home

Simple, quick and inexpensive!

Math Fun For Home
Simple, quick and inexpensive!

Math Fun For Home

Take Home Math Game

Memory Math Game

Objective: To collect the most number of matches

Directions to play:

- 1) Shuffle the cards and lay them face down in rows on the table.
- 2) The first player turns over 2 cards.
 - a) If the cards match, the player keeps the cards and tries again for another match.
 - b) If they do not match, the cards are turned over again and the player to the left takes a turn.
 - c) Each player must try to remember where they have seen cards, so they can use them to make a match.
- 3) When all of the cards have been matched, players count their pairs. The one with the most pairs wins.

Example of a match:

Visual of 5 matches the number 5

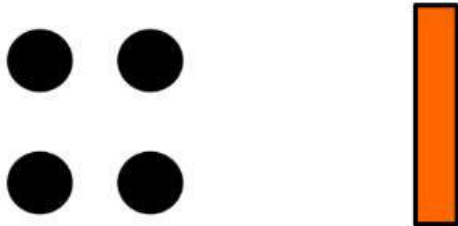

MATCH

5

Examples that are not a match:

Visual of 4 does not match the number 1

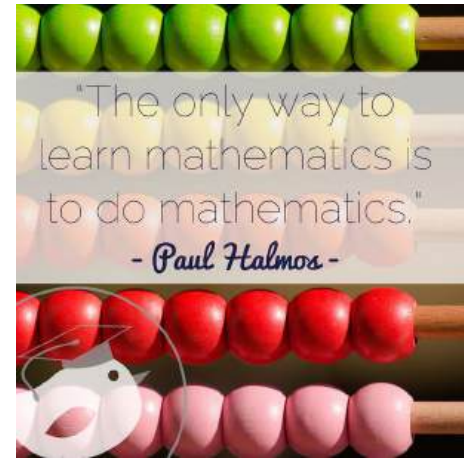

Visual of 2 does not match visual of 3

Final Thoughts

- Math is anywhere and everywhere
- Talk about math regularly with children by pointing out the numbers, patterns, shapes and measurements we see in the world around us
- Encourage your children and students to be curious and take risks in their learning
- Let children be "problem solvers" by providing them with authentic opportunities to engage in math
- Let them "Do Math" and learn with them!
